Where to Seek Support

- Email: support@yo.co.ug
- Telephone: +256 31 224 4641

Prerequisites

- A copy of latest Word Press CMS.
- Yo! Payments Sandbox Account used for testing. Use this link to sign upon

  https://41.220.12.206/services/yopaymentsdev/signup/start/?sid=1

- Yo! Payments Business Account. This is if your MTN Payments are to be handled on the public system.
- Yo! Payments Pay1 Account details in case you have your own collections account (merchant) with networks. Normally these details as shared with you after your account is Set up at Yo! Uganda Limited.
- A copy of the Woo-Commerce Yo! Payments zip file. This is the plugin file to upload when conducting installation.

Installation Instructions

Please follow the instructions below to setup Yo! Payments for Woo-Commerce Word press plugin:

1. To use the plugin, ensure that you already installed Woo-Commerce plugin into your existing Word press CMS.
2. Installation is easy, simply login to your Word Press admin portal, go to plugin section and click 'Add New' button. Choose to upload the plugin zip file attached to this email.
3. After installation, now move to "Setting" section of the Woo-Commerce and then click on the Checkout tab. Scroll down to Payment Gateways. You should see Yo! Payments added to the list of these gateways.

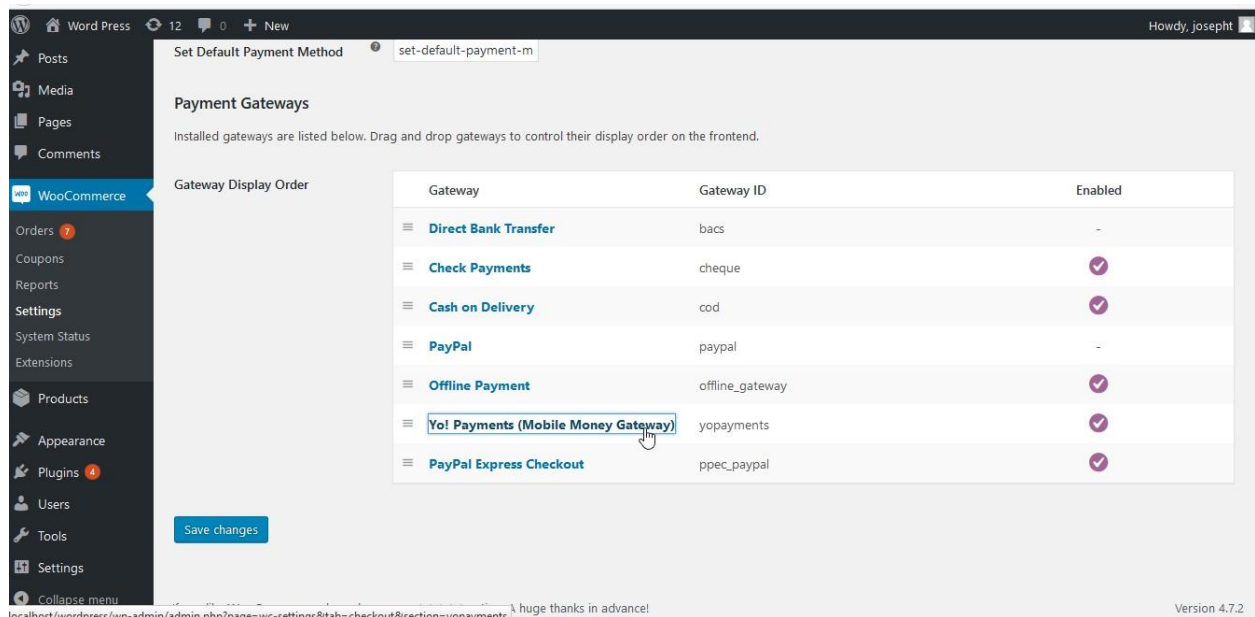

Figure 1-View of Yo! Payments After Installation.

4. Click on Yo! Payments gateway so you can be taken to the settings page, see screenshot below.
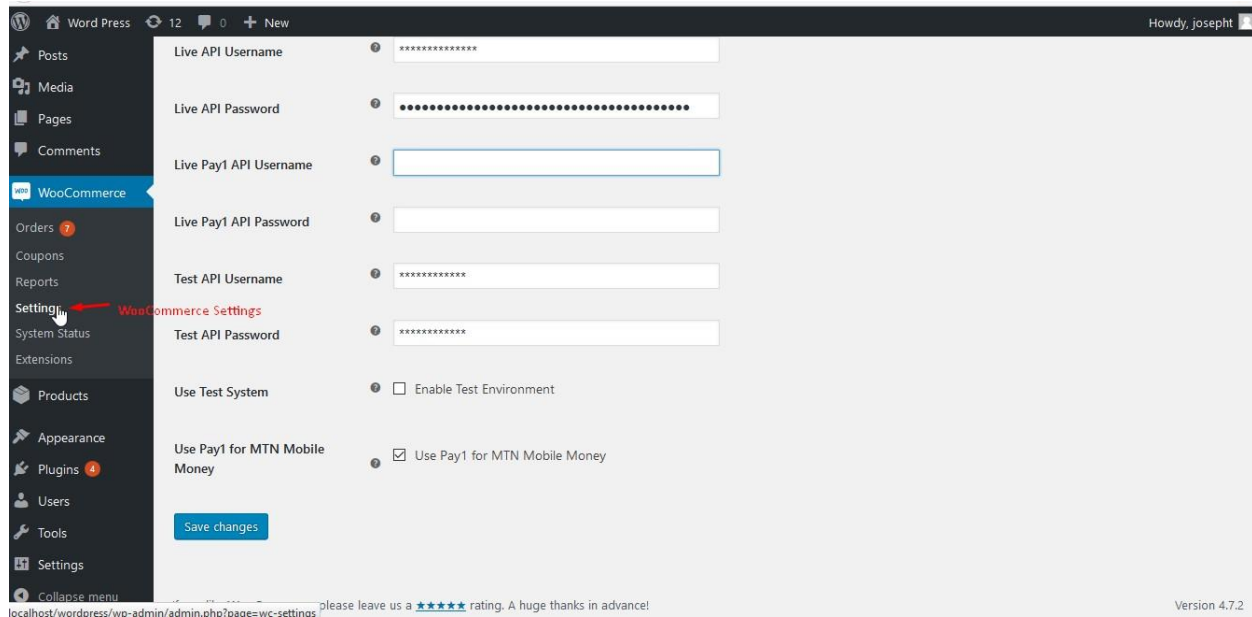

Figure 2-Accessing Settings Page of Woo-Commerce.

5. You should by now have a Yo! Payments business account already, if not, contact your accounts manager to assist you in obtaining one, or visit http://payments.yo.co.ug.

6. Depending on the kind of integration you want, Yo! Payments can avail various accounts on different systems. That is to say, the public (main) system and the Pay1 system. The public system processes payment that are hosted at Yo! Uganda (in this case you liquidate your money from Yo Uganda), well as Pay1 system handles payments where you obtained a collections account with the networks (MTN and/or Airtel), for which your payments are hosted at the network (you liquidate your money from the network). That said, depending on which account and on which system that account is held, you can configure the Yo! Payments Woo-Commerce setting as below:

   a. API Username & password: These should be obtained from the public system: https://payments.yo.co.ug/ybs/portal.

   b. Pay1 API Username & Password: These should be obtained from the pay1 system: https://pay1.yo.co.ug/ybs/portal. Usually this account is created by one of Yo! Uganda staff and the credentials are shared with your administrator after your collection account has been mapped at the network. If you don't have this account yet, you may leave these fields blank.

   c. Test API Username & Password: Obtain these from the Sandbox system at http://41.220.12.206/services/yopaymentsdev/portal/index.php. If you don't have a sandbox account, sign up a free business Sandbox account here: https://41.220.12.206/services/yopaymentsdev/signup/start/?sid=1

   d. If you want your Woo-Commerce to point to your Sandbox account, check the "Use Test System" checkbox, otherwise it will point to the production systems.

   e. If you want your MTN payments to be processed by Pay1 system and given you already have a Pay1 account which was mapped to your MTN Collection account, then check "Use Pay1" for MTN Mobile Money.

   f. Click Save Changes to submit the form.

Figure 3-Settings Page of Yo! Payments

7. Add some sample products and try testing. At checkout point, the payer should be asked for their Mobile Money number when they select Yo! Payments from the list of payment options.
8. After submission, if pointing to the live system, you should then see the popup on your phone. Enter your pin to authorize payment and the order will be updated after payment without leaving your Woo-Commerce site.

Figure 4-Checkout View of Yo! Payments

IMPORTANT: *If there is a problem where the payment has been made and for some reason the order isn't updated, it will stay in processing/pending payment state until when you conform payment from the statement and update it manually.*
